Geghayr Melkonyan

AI / Senior Backend Engineer | LLM Integration · Python · Go · Node.js | High-Load Systems

Yerevan, Armenia gexayrmelkonyan@gmail.com +374 93 11 37 20 linkedin.com/in/gexayr github.com/Gexayr gexayr.github.io Telegram: @gexayr

SUMMARY

AI / Backend Engineer with 9+ years of experience designing and scaling high-load, distributed systems that serve 100k+ concurrent users at 99.9% uptime across iGaming, banking and e-commerce. Builds production-grade backend services, data pipelines and microservices, and integrates AI/ML models and LLM APIs (OpenAI, LangChain) with vector databases and real-time data streams into business-critical products. Strong in Python, Go and Node.js, with a proven record of improving system performance and data/inference pipeline throughput by 30–50%, automating CI/CD, and mentoring engineers.

TECHNICAL SKILLS

AI & LLM:	LLM API integration (OpenAI), LangChain (basics), AI/ML model integration, Vector Databases, Data Pipelines, Anomaly Detection
Languages:	Python, Go (Golang), Node.js (JavaScript), PHP (Laravel, Yii2), SQL
Backend & Architecture:	Microservices, REST APIs, WebSockets, Message Queues, Real-Time Processing, High-Load & Distributed Systems
Databases & Caching:	PostgreSQL, MySQL, Redis, MongoDB
DevOps & Cloud:	Docker, GitLab CI/CD, Linux, Nginx, AWS (basics), Logging & Monitoring
Frontend & Testing:	React.js, Vue.js, Angular, HTML5, CSS3, PHPUnit, Jest

PROFESSIONAL EXPERIENCE

Senior Software & AI Integration Engineer – SmartBet / ABC Lab *Jun 2021 – Present*

- Architected and scaled a high-load, real-time platform serving 100k+ concurrent users at 99.9% uptime, integrating high-throughput data services and real-time event processing
- Integrated third-party services and data streams processing $2M+ in monthly transactions, adding pattern recognition and anomaly detection to flag suspicious activity
- Improved API response times and data-ingestion pipeline throughput by 30% through SQL query tuning, Redis caching strategies and optimized data structures
- Designed a Dockerized microservices architecture with automated GitLab CI/CD pipelines, cutting deployment time by 50% and eliminating release-related production errors
- Mentored 3 junior engineers through code reviews, clean-code practices and scalable architecture patterns

Backend Engineer – Ardshinbank *Aug 2020 – Jun 2021*

- Led backend development of core banking modules (card management, loan processing, customer accounts) serving 500k+ users
- Modernized a legacy Yii2 codebase, speeding up transaction processing by 40% and reducing system errors by 60%
- Integrated secure REST APIs with third-party financial services, ensuring PCI DSS compliance and end-to-end data encryption
- Implemented logging and monitoring for real-time transaction tracking and fraud prevention

Backend Engineer – Globbing *Sep 2019 – Aug 2020*

- Developed a large-scale e-commerce and logistics platform (Laravel) processing 50k+ orders per day for international operations
- Raised system uptime from 95% to 99.5% through database optimization and robust error handling
- Built RESTful APIs for mobile app integration and third-party logistics providers

Software Developer – World of Duty *Aug 2018 – Jun 2019*

- Built automated, data-driven cryptocurrency trading bots in Node.js executing 1,000+ trades per day across multiple exchanges
- Increased data pipeline performance by 45% through optimized API polling and efficient data aggregation algorithms
- Developed real-time analytics dashboards (Angular, WebSockets) for live market data visualization

Full-Stack Developer – Blessed Solutions *Dec 2016 – Aug 2018*

- Delivered 15+ full-stack web projects (Laravel, Yii2, WordPress) for diverse clients
- Improved average client site performance by 35% through code optimization, caching and CDN implementation

EDUCATION

B.Sc. in Information Systems Engineering – National University of Architecture and Construction of Armenia (NUACA) | *2007 – 2011*
